

HOW TO USE STUDIOBINDER'S

MOVIE POSTER TEMPLATE

MOVIE POSTER TEMPLATE

MADE BY STUDIOBINDER.COM

Using the Template

Your movie poster files will download as a .zip file. Simply unzip and all the files will be ready to use.

Included in this bundle are the fonts, **Tall Dark and Handsome** and **Montserrat**. You can install these fonts by opening the folder labeled, “Fonts.” Unzip and double click on each font. Install fonts when prompted.

Open the **Movie Poster Template.psd** with Adobe Photoshop. We have included two variations to explore the dynamics of placement and color. You’ll first see two layers colored Violet and Green. The Violet layer has content with a light background image and the Green layer has content with a dark background image.

Click on the down arrow for each grouped layer. From here, go to the layer labeled, “**Content to Edit.**” Use the Text tool to replace wording according to your needs.

You can move content around by holding Shift/Cmd on a Mac or Shift/Ctrl on a PC and clicking on the grouped layer.

Feel free to explore placement, colors, and font sizing.
